Basic Experiment Concept

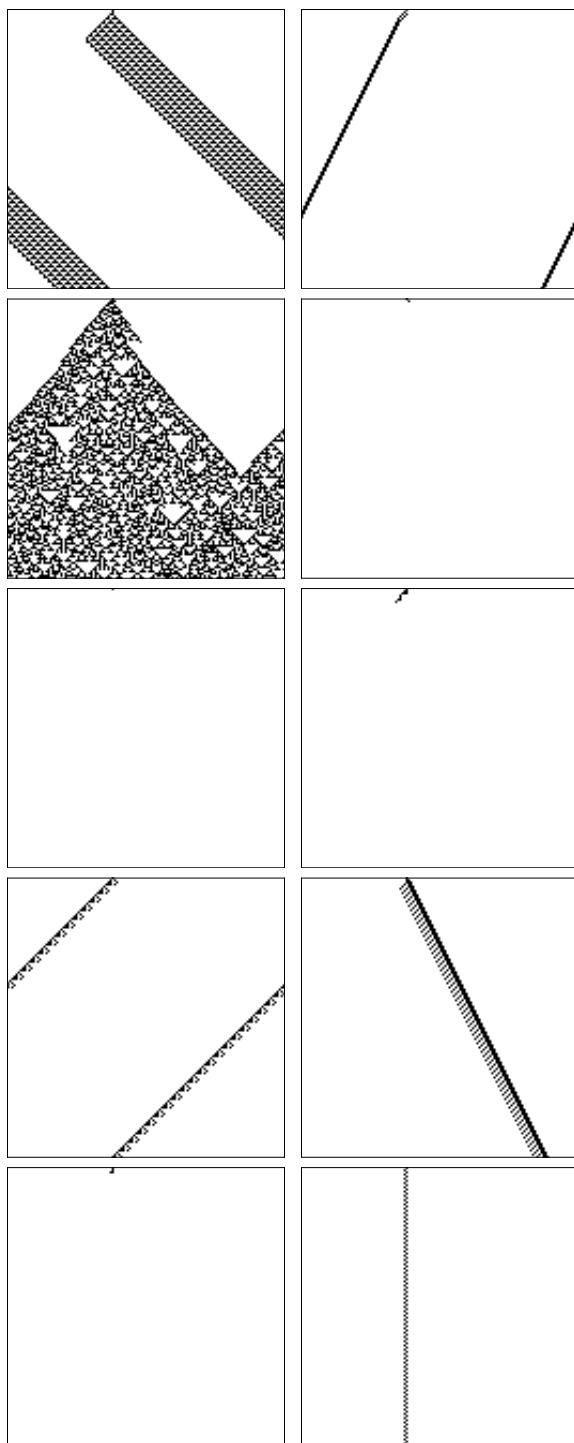

Difference Patterns for Elementary Cellular Automata

```
Grid[Partition[Table[With[{init = (SeedRandom[24]; RandomInteger[1, 130])},
  ArrayPlot[BitXor[CellularAutomaton[r, init, 130], CellularAutomaton[r,
    MapAt[Abs[# - 1] &, init, {50}], 130]], PixelConstrained -> 1]], {r, 0, 255}], 2]]
```

Moving the Perturbation

```
Manipulate[Module[{evoll, evol2, init}, init = (SeedRandom[1]; RandomInteger[1, width]);
  evoll = CellularAutomaton[r, {init, 0}, {50, {0, Length[init]}}]; evol2 =
  CellularAutomaton[r, {MapAt[Abs[# - 1] & , init, {i}], 0}, {50, {0, Length[init]}}];
  Grid[{{ArrayPlot[evoll, ImageSize → Medium], ArrayPlot[BitXor[evoll, evol2],
    ImageSize → Medium]}}, {{r, 41, "rule"}, 0, 255, 1},
  {{i, width/2 // Ceiling, "position"}, 1, width, 1},
  {{width, 40, "width"}, 10, 100, 1}, SaveDefinitions → True]
```

Collecting the Perturbations

```
ArrayPlot /@ With[{width = 20},
  Table[Module[{evoll, evol2, init}, init = (SeedRandom[1]; RandomInteger[1, width]);
    evoll = CellularAutomaton[54, {init, 0}, {20, {0, Length[init]}}];
    evol2 = CellularAutomaton[54, {MapAt[Abs[# - 1] & , init, {i}], 0},
      {20, {0, Length[init]}}]; BitXor[evoll, evol2]],
  {i,
  1,
  20}]]
```

```

ArrayPlot@Total[With[{width = 20},
  Table[Module[{evol1, evol2, init}, init = (SeedRandom[1]; RandomInteger[1, width]);
    evol1 = CellularAutomaton[54, {init, 0}, {20, {0, Length[init]}}];
    evol2 = CellularAutomaton[54, {MapAt[Abs[# - 1] &, init, {i}], 0},
      {20, {0, Length[init]}}]; BitXor[evol1, evol2],
    {i,
      1,
      20}]]]

```

Collecting the Perturbations

```
Grid[Partition[
  Table[With[{init = (SeedRandom[24]; RandomInteger[1, 130])}, ArrayPlot[Total[With[
    {width = 20}, Table[Module[{evoll, evol2}, evoll = CellularAutomaton[r, init, 130];
    evol2 = CellularAutomaton[r, MapAt[Abs[# - 1] &, init, {i}], 130];
    BitXor[evoll, evol2]],
    {i, 1, 130}]]], PixelConstrained -> 1]], {r, 0, 255}], 2]]
```

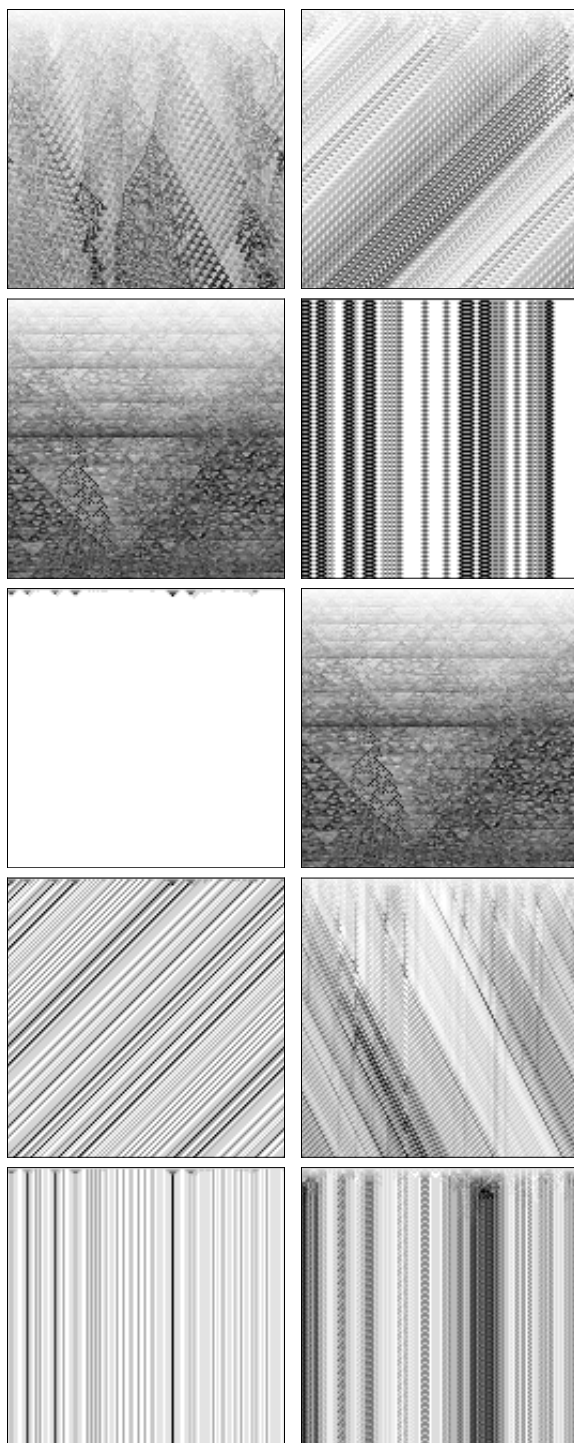

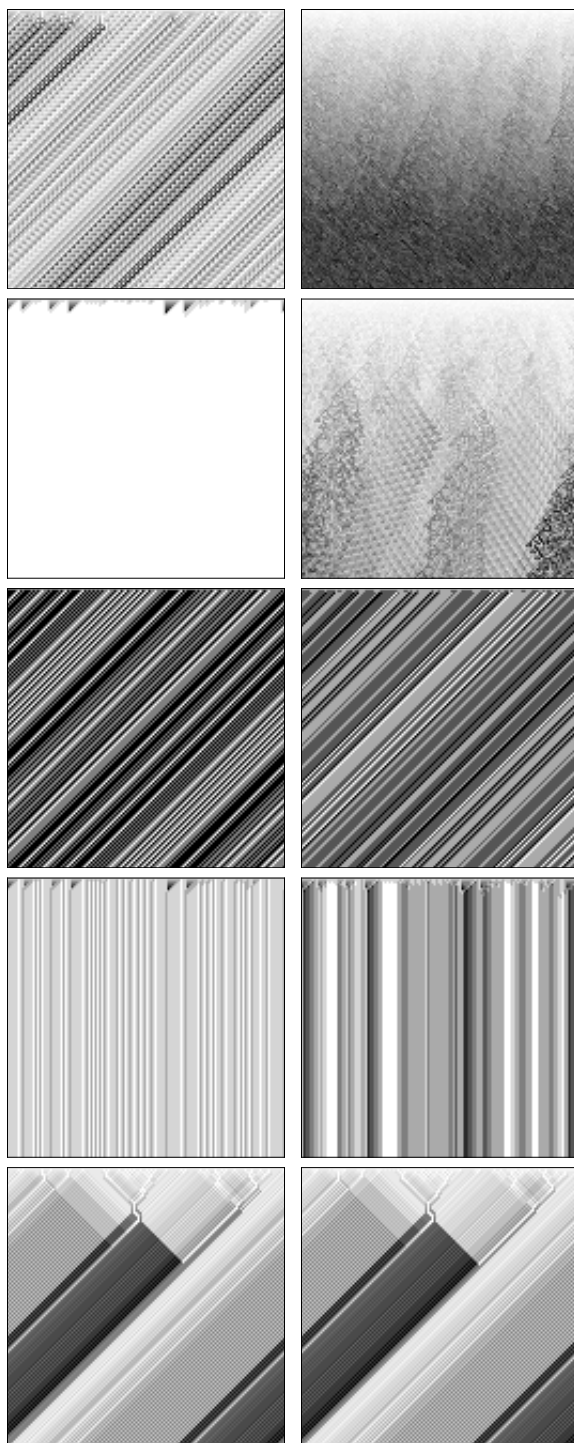

Specific Rules

```
With[{init = (SeedRandom[24]; RandomInteger[1, 300])}, ArrayPlot[Total[With[{width = 20},  
Table[Module[{evol1, evol2}, evol1 = CellularAutomaton[90, init, 300]; evol2 =  
CellularAutomaton[90, MapAt[Abs[# - 1] &, init, {i}], 300]; BitXor[evol1, evol2]],  
{i, 1, 300}]]], PixelConstrained -> 3]]
```

```
With[{init = (SeedRandom[24]; RandomInteger[1, 300])}, ArrayPlot[Total[With[{width = 20},
Table[Module[{evol1, evol2}, evol1 = CellularAutomaton[30, init, 300]; evol2 =
CellularAutomaton[30, MapAt[Abs[# - 1] &, init, {i}], 300]; BitXor[evol1, evol2]],
{i, 1, 300}]]], PixelConstrained -> 3]]
```

```
With[{init = (SeedRandom[24]; RandomInteger[1, 300])}, ArrayPlot[Total[With[{width = 20},
Table[Module[{evol1, evol2}, evol1 = CellularAutomaton[22, init, 300]; evol2 =
CellularAutomaton[22, MapAt[Abs[# - 1] &, init, {i}], 300]; BitXor[evol1, evol2]],
{i, 1, 300}]]], PixelConstrained -> 3]]
```

```
With[{init = (SeedRandom[24]; RandomInteger[1, 300])},  
  ArrayPlot[Total[With[{width = 20}, Table[Module[{evol1, evol2},  
    evol1 = CellularAutomaton[126, init, 300]; evol2 = CellularAutomaton[  
      126, MapAt[Abs[# - 1] &, init, {i}], 300]; BitXor[evol1, evol2]],  
    {i, 1, 300}]]], PixelConstrained -> 3]]
```

```
With[{init = (SeedRandom[24]; RandomInteger[1, 300])}, ArrayPlot[Total[With[{width = 20},
  Table[Module[{evol1, evol2}, evol1 = CellularAutomaton[54, init, 300]; evol2 =
    CellularAutomaton[54, MapAt[Abs[# - 1] &, init, {i}], 300]; BitXor[evol1, evol2]],
    {i, 1, 300}]]], PixelConstrained -> 3]]
```

Isolating the "Fractures"

In[157]:=

```
Manipulate[
  ArrayPlot[With[{ev = Overlap[r, pos1, pos2, 60]}, ColoredArray[ev, GetComponents2[ev]]],
    ColorRules -> {0 -> Black}, ColorFunction -> (Hue[Random[]] &),
    ColorFunctionScaling -> True, PixelConstrained -> 10],
  {pos1, 1, 40, 1}, {pos2, 1, 40, 1}, {r, 0, 255, 1}, SaveDefinitions -> True]
```
